

L E A R N C H A I N

Adaptive Learning, Verifiable on the Blockchain.

AI-built courses. Merit-based credentials. Built for the next billion learners.

VC Pitch Deck
Seed Round • May 2026

Education is broken — for learners, teachers, and the people funding them.

1.6B

learners in emerging markets without access to quality, low-bandwidth education.

30–50%

of teacher revenue captured by incumbent platforms (Coursera, Udemy).

\$0

transparent rails today for funders to disburse merit-based education grants.

Learners are priced, throttled, and forgotten.

THE RURAL LEARNER

*"My phone has 1 GB of RAM.
My data plan is 2G.
My nearest university is six hours
away."*

Excluded by data cost, slow connections,
and devices Coursera was never built for.

Priced out

Coursera and Udemy assume disposable income and credit cards.

Throttled out

Pages built for fiber don't load on a 2G connection in 5 seconds.

Forgotten

Lecture-heavy, linear content — learners forget as fast as they consume.

Unrecognized

Credentials are easily faked and hard to verify across borders.

Teachers build the value. Platforms keep most of the money.

Revenue split — incumbent platforms vs. LearnChain

WHAT TEACHERS FACE

Course production is hard.

Video editing, LMS setup, structured curricula — none of it teachers signed up for.

Platforms take 30–50%.

A coach in Cebu earns cents per enrollment on US-priced platforms.

No path to verified outcomes.

Completion data lives in a silo a graduate can never carry with them.

Funders want to fund learning. There is no rail.

THE FUNDER PROBLEM

*"We have the budget.
We don't have a way to verify
who actually learned anything."*

— NGO program lead, Philippines

*Grants today are paper-based, opaque,
and impossible to target by merit.*

01 No verifiable learning record

Completion data is trapped inside platform silos and cannot be audited.

02 No targeting by merit

Grants are awarded by application — not by demonstrated, sustained learning.

03 No programmable disbursement

Funds move through wires and intermediaries. There is no neutral rail.

Three pillars. One platform. Learning-first by design.

AI Course Generation

Teachers upload raw materials — PDFs, videos, docs. Claude turns them into a structured course in minutes. No video editor. No LMS.

Evidence-Based Adaptive Learning

Spaced repetition, retrieval practice, mastery progression. ADHD-friendly chunking. Real learning science — not 'learning styles' pseudoscience.

Verifiable Credentials on Stellar

W3C Verifiable Credentials + Open Badges 3.0. Hash-anchored on Stellar. Portable across borders, HR systems, and learning platforms.

Raw materials in. Structured course out — in minutes.

THE MOAT

Claude Sonnet 4.6 for generation, Claude Haiku 4.5 for structural ops, with prompt caching. AI is called once per course — never per page view. Near-zero marginal cost per learner.

Learning that sticks. Progress you can prove.

EVIDENCE-BASED, NOT 'LEARNING STYLES'

AI Assist Mode

- **Spaced repetition**
- Concepts resurface on an expanding schedule.
- **Retrieval practice**

Low-stakes quizzing beats passive re-reading.

- **Mastery progression**

Advance when you can — not on a fixed clock.

- **Difficulty calibration (Elo / IRT)**

Questions tune to the productive-challenge zone.

- **ADHD-friendly chunking**

Short blocks, micro-checkpoints, clear progress.

MERIT, NOT LEARN-TO-EARN

XP, Streaks & Badges

XP is cumulative and never spent. Streaks reward consistency. Badges become Verifiable Credentials.

5

Levels
Seed → Mentor

∞

XP
Never burned

100d

Streaks
Reward milestones

Harder to game than payout tournaments. Funders target by sustained merit.

Credentials that travel. Grants that flow on merit.

01

Learner completes course

02

W3C Verifiable Credential
issued (Open Badges 3.0)

03

Hash anchored on Stellar

04

Verifier checks signature +
on-chain hash

05

Recognized by HR, LMS, EU
Europass

THE GRANT-ELIGIBILITY LAYER

LearnChain decides eligibility. A licensed VASP moves the money.

Funder sets criteria ("Agriculture learners, Region IV, 30,000+ XP, Consistent Learner badge").

LearnChain evaluates the merit ledger and produces the verified recipient list.

A licensed PH VASP (Coins.ph / PDAX / GCash) disburses USDC or PHP. Every event hash-anchored, audit-exportable.

Reward-first platforms collapse when the rewards stop.

	On-chain creds	Creator share	Sub-3G design	Filipino-first	Orientation
LearnChain	W3C VC + OB 3.0	High	Yes	Yes	Learning-first
Open Campus	Yes	Yes	No	No	Reward-first
BitDegree	Yes	Yes	No	No	Reward-first
POK	Open Badges 3.0	Limited	No	No	Credential-first
Duolingo	No	No	Partial	Partial	Engagement-first
Coursera	Proprietary	Yes	No	No	Content-first

Our wedge: learning-first compounds. Reward-first collapses. *Sustained learning is exactly what attracts continued grant funding — and what reward-first incumbents never produce.*

Four revenue lines. One network that compounds.

0 1

Transaction fees

On course sales and grant disbursements. Lowest-in-market take rate at launch; scales toward industry norm with growth.

0 2

Org subscriptions

NGOs, schools, corporates: \$49/mo Org Pro tier — custom branding, funder dashboard, SLA.

0 3

Ecosystem grants

Stellar Development Foundation, foundations, government — the immediate funding source and pitch right now.

0 4

Adjacent verticals

The merit graph unlocks education financing, commodity-trade enablement, anonymized data products. Post-MVP.

Philippines first. Southeast Asia next.

12-MONTH TARGETS

500

teachers / coaches across
Tech, Agri, Arts, Language

3

partner NGOs
in Year 1

2

PH government agencies
TESDA, DepEd, DICT

ENGAGEMENT TARGET

15–18%

DAU / MAU ratio at 3 months

Industry-realistic — sits in the Duolingo band. Honest targets win partner trust.

Stretch goal: 22%

From MVP to regional infrastructure.

PHASE 0

Weeks 1–3

MVP

- AI course generation
- Verifiable Credential on Stellar Testnet
- XP + badges
- Public verifier

PHASE 1

Months 1–3

Public Beta

- Full AI Assist adaptive engine
- Offline lesson caching
- Stellar Mainnet + VASP rail
- NPC-registered compliance

PHASE 2

Months 4–9

Growth

- Native Android + iOS
- Cebuano, Bahasa, Vietnamese
- Org subscription billing
- Soroban automated grants

PHASE 3

Months 10–18

Scale

- SEA regional expansion
- DepEd / TESDA pilots
- Peer-tutoring marketplace
- On-chain governance

T H E A S K

Back the rail that makes learning verifiable, fundable, and portable for the next billion.

Capital

Seed round to fund Phase 1: full adaptive engine, Stellar Mainnet, NPC compliance.

Conviction

Investors who understand that learning-first compounds where reward-first collapses.

Connections

Intros to SEA NGOs, DepEd/TESDA, licensed PH VASPs, and Open Badges institutional issuers.
